

# World leading racing parts manufacturer selects GE Security

## Brembo

Brembo was founded in 1961 as a small mechanics garage located a few kilometres from Bergamo, Italy. For the first time in 1972, the Brembo brand was applied to motorcycles manufactured in Europe, with a supply for Moto Guzzi. In short, Brembo became leader in the braking systems market for two-wheel vehicles. At present, Brembo employs more than 5,400 people, 8% of which are engineers and product specialists working in research and development. Brembo currently operates in 3 continents with production plants in 12 countries; their commercial sites are based also in Sweden and France, while their products are sold in over 70 Countries.

#### **Pre-existing situation & GE Security's role**

Over the years Brembo's Italian sites had been equipped with security systems from multiple manufacturers and installers. As a result, maintenance was not an easy job. Next to this, some of the system had become outdated throughout the years.

As a result, Brembo looked for a security manufacturer who could provide them with a standardised intrusion and fire detection system for its three sites around Bergamo, Italy.

GE Security's Italian security team was able to not only offer an open security platform which met Brembo's security requirements, but was also able to allow integration of the new system with other existing security management solutions.

#### **GE Security's Solution**

In two of these sites, fire detection was provided using GE Security's FP product range. Four control panels are currently placed operating over 350 heat and smoke detectors.

For all three sites, intrusion detection has been provided using GE Security's ATS Master platform. The main asset of the ATS Master system is its capability to be configured in such a flexible way that it can substantially increase security while improving user friendliness. Over the three Brembo sites in Bergamo there are currently seven ATS Master control panels in place. These control panels monitor over 1,400 detectors.

Next to delivering the security solution, GE Security's technical department continually supports its local installer to solve possible issues and to handle new requests coming from Brembo.

As Brembo expands its activities Italy, every site will be equipped with the ATS Master solution.
